DEMOLITION

We undertake all aspects of demolition and dismantling with over 75 years combined demolition experience within the company.

Our owned fleet of plant and equipment means we are equipped and ready to tackle the requirements of our clients.

In a tight city centre or vast industrial areas we have the experience and knowledge to deliver your project on time, within budget and safely.

SOFT STRIP

Our in house strip out teams are experienced in dealing with the challenges that these type of works can present and have control measures in place to ensure the project is carried out to the full satisfaction of the client.

Our soft strip packages are tailor made to our clients refurbishment needs, including full internal demolition back to basic structure.

DISMANTLING & DECOMMISSIONING

Our in-house Demolition engineers will understand the nature and build of the structure and where it is situated. We then develop a bespoke plan to dismantle the structure.

Our in house decommissioning teams can decommission any redundant assets a client may have, including:

- Redundant machinery
- Fuel Tanks and Oil Tanks
- Overhead Cranes
- Power Plants

ASBESTOS REMOVAL

Burke Demolition can undertake the safe removal and disposal of asbestos containing materials (ACMs). Through working within current legislation, and HSE best practices, we deliver a high standard of works, complete with independent UKAS accredited air monitoring, and licensed waste carrying to transfer station or landfill.

With ACM removal projects being split into licensed notifiable work (ASB5) and non-licensed notifiable work (ASB NNLW1) we work closely with our approved licensed contractors for ASB5 notified works (a 14-day notification period), and with our in-house non-licensed notifiable work operatives (also known as Category B) we undertake ASB NNLW1 notified works (a 1 day-notification). In addition to these services, we can offer professional assistance in Refurbishment and Demolition asbestos surveys, material sampling, and asbestos consultancy.

ROBOTIC DEMOLITION & CONCRETE CUTTING

Concrete cutting is a cost effective method used to cut holes through heavily reinforced concrete floors, walls and soffits. Using this method causes minimal disruption to surrounding structures and leaving minimal making good works.

Using demolition robots in tight/restricted access areas is a great way to reduce the amount of HAVS (Hand Arm Vibration syndrome). Keeping the operator at a safe distance controlling the robot that is 10 times more powerful than traditional methods.

COMPLIANCE, SUSTAINABILITY & SOCIAL VALUE

We are certified to Constructionline Gold accreditation (1206234), which in turn includes certification in Social Value, Builders Profile, and the Acclaim Accreditation Safety Scheme in Procurement (SSiP). We are also verified members of the Supply Chain Sustainability School and the 5% Club.

This confirms our procedures and controls for health, safety, environment, and quality, have all been assessed independently, and externally as compliant with PAS91 and the Common Assessment Standard (CAS).
